

CLAIMS

1. This invention is to be used with existing and new flush tanks that have a water supply and a float shut-off valve.

2. The dual flush valve wherein the first flush valve 1 includes a first operator handle operably mounted on an exterior portion of the new or existing flush tank to provide a partial flush.

3. The dual flush valve wherein the first flush valve 1 includes a first operator handle operably mounted on an exterior portion of the new or existing flush tank to provide a full flush.

Note: The partial flush valve will be (claim 2) used 80 to 85 percent of the flushing.
